6. EXTENDED PRODUCT INFORMATION

6.1 Usage

Psyllium fiber is used as a dietary fiber to increase fiber intake in a diet. Psyllium fiber is made from the seed coats (husks) of psyllium. These are fresh whole, dried, and ground into powder. These seed coats consist of more than 80% fiber. The dietary fiber contained in the seed coat of psyllium can bind more than fifty times its own weight in water. When using Psyllium fiber, ensure adequate fluid intake.

Psyllium is also used as a binding agent in gluten-free bread because of its highly absorbent properties. This property replaces the normal function of gluten. The addition of 5 to 7% psyllium fiber (flour weight basis) to the formulation of gluten-free bread improves the structure, appearance, texture, and acceptability of gluten-free bread and delays bread staling, resembling physical and sensory properties of wheat bread.
